## North East West South is NEWS

Israeli Prime Minister Benjamin Netanyahu announced his country's readiness to support Lebanon's efforts to disarm Hezbollah and proposed a "phased" withdrawal of Israeli troops if Lebanon seizes Hezbollah weapons as planned.

US President Trump said he hopes to meet with North Korean leader Kim Jong-un again, possibly this year.

German Chancellor Merz announced that Germany and Canada will sign an agreement to increase cooperation on critical raw materials to reduce their heavy dependence on China.

Donald Trump announced last night the dismissal of Federal Reserve Governor Lisa Cook over allegations that Cook made false statements in mortgage documents. He vowed to impose "significant additional tariffs" on goods from countries that do not rescind digital taxes and regulations, and threatened export restrictions on "highly protected (US) technology and chips," but did not provide further details.

US President Trump said he spoke with Russian President Vladimir Putin after meeting with Ukrainian President Volodymyr Zelensky and European leaders in Washington last week.

## Is There a Lower Level That's More Profitable?

- **Short-term dips** could occur due to earnings volatility, regulatory risks, and competition.
- Some forecasts suggest TSLA could dip to **\$289–\$313** in the coming months **6**.
- If you're patient and want a better entry, watching for a pullback toward the **\$300 level** might offer more upside.

Forecast by Microsoft AI on July 18<sup>th</sup> 2025.

On July 24<sup>th</sup>, lowest point was \$300.41

On Aug 1<sup>st</sup> lowest point was \$297.82 and went up till now.

# Superman Elon Musk,

## CEO of the following companies.

### 1. SpaceX – Aerospace & Space Exploration

By Microsoft AI

- Musk founded SpaceX to revolutionize space travel and colonize Mars.
- It develops rockets like Falcon 9 and Starship, and operates Starlink, a global satellite internet service.

### 2. Tesla Inc. – Electric Vehicles & Energy

- As CEO, Musk has turned Tesla into a global leader in EVs, battery tech, and solar energy solutions.
- Tesla also pushes AI and robotics through its autonomous driving and Optimus robot projects.

### 3. X (formerly Twitter) – Social Media

- Musk acquired Twitter in 2022 and rebranded it as "X," aiming to build an "everything app" combining social media, payments, and more <sup>1</sup>.

### 4. Neuralink – Neurotechnology

- Focused on brain-computer interfaces, Neuralink aims to help people with neurological conditions and eventually merge human cognition with AI.

### 5. The Boring Company – Infrastructure & Tunneling

- This venture tackles urban congestion by building underground transportation systems, like the Vegas Loop.

### 6. xAI – Artificial Intelligence

- Founded in 2023, xAI is Musk's answer to OpenAI. It powers the chatbot "Grok" and aims to build AI that's "maximally curious" <sup>1</sup> <sup>2</sup>.

### 7. Macrohard – AI Software

- A cheeky name with serious ambition: Macrohard is Musk's newest company, designed to challenge Microsoft by building AI-driven software platforms <sup>3</sup>.

*They are in different sectors but nearly all of them are of revolutionary level.*

# Riding the AI Waves

(11) TSLA

Cathy Wood once said, if she is allowed only to buy one US stock, she would choose TSLA, for it is an all in one stock.

The sales of e-car sales can put aside, but the Full Self Driving (FSD) will be matured at level 14 in September. The robotaxi fleet is now running in California and just entered into New York for trial purpose. Unsupervised Full Self Driving will be ready for commercial use by the end of this year. Henceforward, it is no need to apply for a driving license again, everyone can jump into a FSD car and just give order like to a robotaxi.

Humanoid robot Optimus will have 5000 sets manufactured in Dec 2025 and next year will produce 50,000 sets. By 2040, there will be 8 billion humanoid robot on earth which is more than human being. But the change is in front of us now, no need to wait for another decade. For the time being, robots are divided into several categories, like domestic use, factory production and warehouse management and medical operation ... etc but in 2027 year, they will be an all in one robot.

This week the Neuralink already had some breakthrough, they use AI to help paralyzed person to control the computer and can talk with the outer world. In 2028, AI Neuralink can made the blind to see, the deaf to hear, the paralyzed to walk ..... it is not a biblical story, but implanting chips to the brain of human being by super-AI on earth. Very soon, human brains will be merged together with computer, it is not a scientific movie in Hollywood, but now happening in our daily life.

The seven companies of Elon Musk are having seven revolutions in the society, in the past may be need seven giants of history come together to change the world, but now only one person can do the magnificent job of seven giants. So AI can change

the world is not a story of tomorrow, it is a story happening in our daily life every day, now and forever, don't say tomorrow anymore.

Let's go to chart analysis of TSLA, in the first half of this year, it dropped greatly together with AMD, and I told investors not to touch them until the Six Star Alignment in August. One thing to mind is that the Microsoft AI suggested to buy between \$289 and \$313, but better under \$300.

On July 24<sup>th</sup> it reached \$300.41 and rebounded, some thought that it would not come down again, and some expected it still would have a further dip. At length it reached \$297.82 on August 1<sup>st</sup>, but for a short while only. So if you do not place limit order, may miss this chance. Some said that the target of \$300 is just a rough estimate, better buy it at \$302 or \$304 or else may miss the chance, but some even said can buy at 298 or 296 or lower for it is just a rough estimate. Actually, it depends on technical data, every time is not the same.

It has been forming a symmetric triangle since June, that means the lowest point are going higher and higher every time, therefore the target of \$300 should be place higher to \$302 or \$304, if placed on lower side \$298 or 296 may miss the chance.

Such as in Dec 2024, during the rise, a lot of people said the resistance is at \$500, some said that it is just a rough estimate, so some said can take profit at \$510 or \$520 if you have confidence, some said better take profit at \$490 or even \$480, don't mind that small amount. And at last it touched \$488 only and came down, so for those that wish to wait and see the \$500 are bounded until now and missed a lot of chances. For in November it already formed a Truncation of Wave 5.

Anyway, in the early stages of the Symmetrical Triangle, the writer said it was in hibernation and later said half awakening and half sleeping. Now, the symmetric triangle is transforming to a *symmetric clinging upward triangle*, not yet ascending triangle.

The AI has given a 5 year forecast of TSLA, but please be make sure the blind point of AI is that it cannot forecast when will the golden pit occurs, and when will TSLA or Elon Musk the superman opens another new page for the whole human being.

*Forecast of Microsoft AI on 18<sup>th</sup> July and market closing was \$329.65*

## Tesla (TSLA) Stock Outlook – July 2025

Tesla is currently trading around **\$329.65**, down roughly **30%** from its 52-week high of **\$488.54**, and analysts are split on its short-term prospects **1 2**. Let's break down your questions:

### Can You Buy TSLA Now?

- **Current sentiment is cautious:** Analysts from Baird and Evercore have reiterated neutral ratings, citing risks like margin compression and declining vehicle sales **3**.
- **Valuation is high:** TSLA's **P/E ratio is ~176**, which is steep compared to industry peers **4**.
- **Volatility is elevated:** Leadership changes and political controversies have added uncertainty **4 5**.

If you're comfortable with volatility and believe in Tesla's long-term innovation (robotaxis, AI, energy), buying now could be reasonable—but it's not a "bargain" entry.

### Is It Suitable to Hold for 5 Years?

Yes, long-term forecasts are optimistic:

Year	Forecasted Avg Price	Upside from Today
2026	~\$617–\$710	+87% to +115%
2027	~\$773–\$949	+135% to +188%
2028	~\$783–\$1027	+137% to +211%
2029	~\$857–\$1044	+160% to +216%
2030	~\$903–\$958	+174% to +190%

These projections suggest **strong growth potential** over 5 years **6 2**.
