This question you can only answer once.

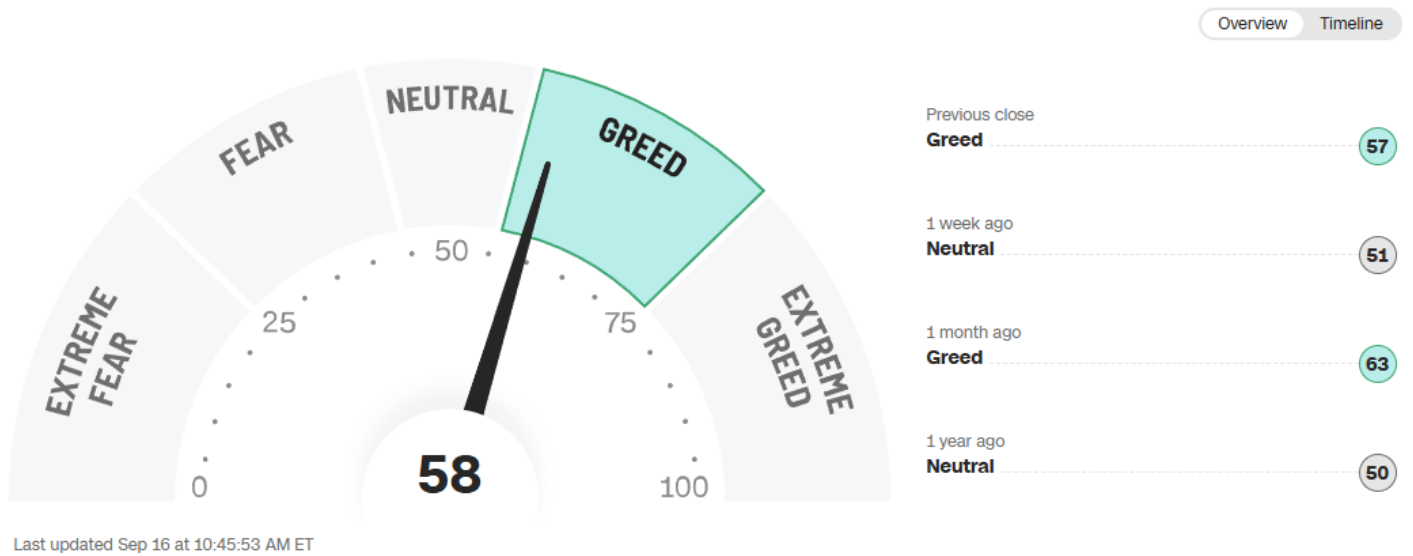

The size of the Sun is quite enormous when in comparison with the Earth. Its volume can fit 1.3 million Earths inside it. Yet in the Milky Way is just a tiny dot. The diameter of the Milky Way is 100,000 light years. There is a question you can only answer once. What is the rotation direction of the Milky Way? Clockwise or Anti-clockwise? Put the answer inside your heart first and turn to World Observation on page 6 to find the answer and receive my congratulation when you are correct.

## North East West South is NEWS

Bessant said he believes President Donald Trump and Chinese President Xi Jinping will finalize the TikTok deal in a phone call scheduled for Friday.

US President Trump has demanded that allies stop buying Russian oil before he imposes sanctions on Russia and that they impose high tariffs on China. However, Trump's demands appear unworkable, and the European Union (EU) has pointed out that it already has sanctions against Russia.

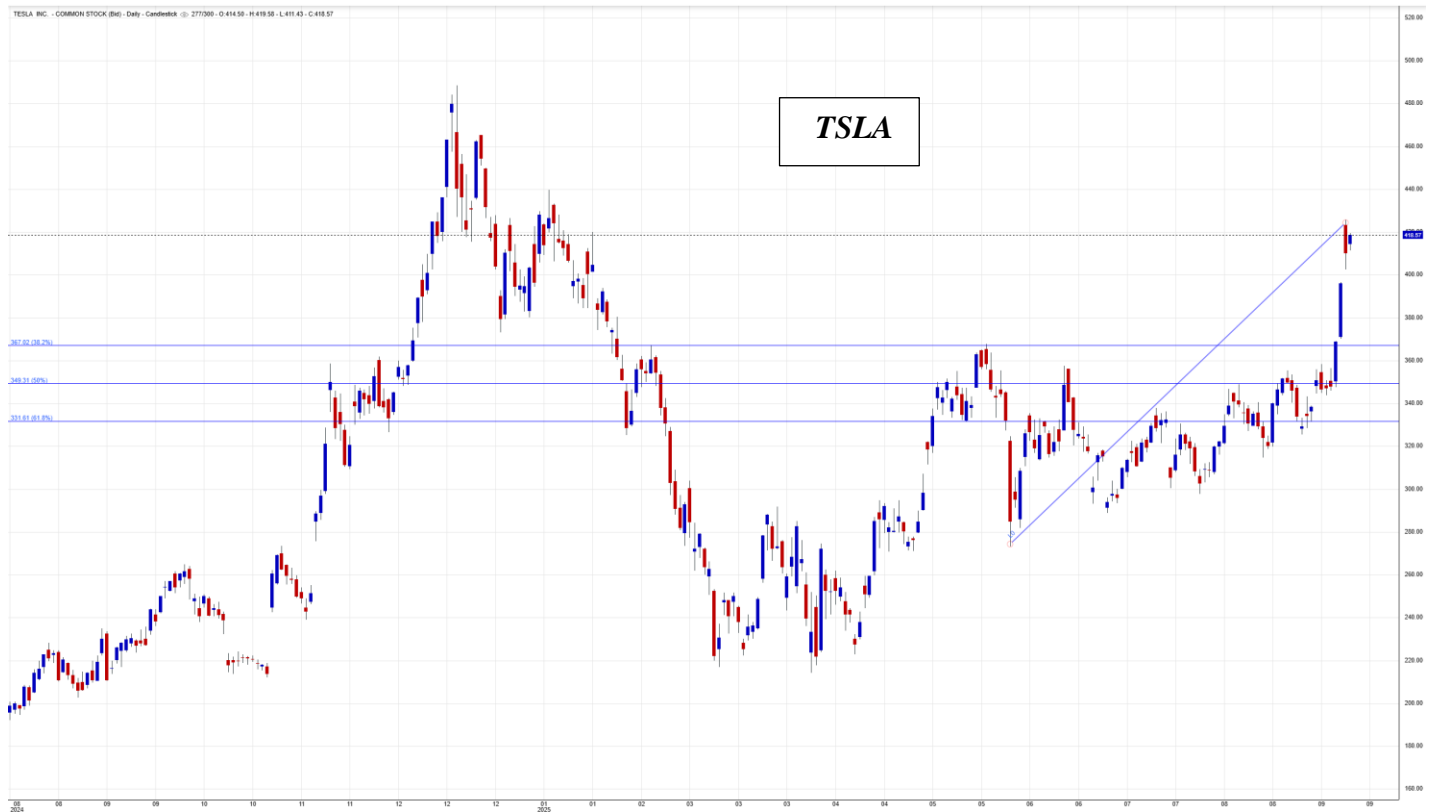

US Vice President J.D. Vance said those who celebrated the killing of conservative figure Charlie Kirk should be held accountable.

US President Trump said today that the US military had sunk another suspected Venezuelan drug ship. Venezuelan President Maduro condemned the US as an "act of aggression," and Trump said he would not rule out a land war to eliminate drug cartels from Venezuela.

Within two weeks of going viral in early September, Gemini became the number one app on both the Apple App Store and Google Play Store globally. The app added 23 million first-time users, and its users generated over half a billion images in a matter of days.

☆ <sup>1</sup> 12	 <b>Oracle</b> ORCL	\$877.11 B	\$308.66	▲ 2.16%		USA

If you want to chase high, these are all anti-falling stocks with strongest recovering power and leading power of the market. Their actual power are the strongest in the market also.

## Market Observation

**Faster than any pen can tell**

**GOOG**  
Market capitalization  
**\$3.306T**  
4<sup>th</sup> in the world

On Monday, the writer just said

***Don't worry! Fear Not! The year of 2025 is an exceptional case in September.***

In the evening, TSLA had a jumping gap up and led the stock market to record high again. There are still good news coming. On the coming Friday, Donald Trump will have a telephone talk with President Xi of China to finalize the purchase of TikTok and ORCL may be one of the buyers but not yet confirmed. Anyway, most of the tariff talk will also be finalized. Rate cut on Wednesday is good news also. GOOG just broke the barrier of \$3 Trillion and becomes the 4<sup>th</sup> company in the \$3 Trillion club. Even if there is adjustment, even if there is a selling on good news, the level is high enough to keep September in positive gains.

GOOG Gemini become the number 1 download apps in Apple Store and GOOG Play, surpassed Chat GPT. Showing that there is a bloom in the AI industry and prove the current rising trend is not a bubble as the Dot Com bubble of 1990s. GOOG also surpassed AMZN, AVGO also surpassed TSM and became number 7. That's why some people say AVGO should be listed among the Magnificent 7 or 8. TSLA at length is in number 10 of Top 10. BRK.B dropped out of Top 10 after Warren Buffet announced retirement in May.

ORCL is a promising stock no matter they would join the purchase of TikTok or not, please refer to The Express of Sep 12<sup>th</sup> (Friday).

If you know how enormous the universe is, you should know that Financial Astrology is not for chasing high or earning profit of double, triple, quadruple or quintuple. This is not enough for small investors to fulfill their dreams. At least should have a profit of 1000%, 2000%, 3000% ..... or more as what Warren Buffet, the God of stocks famous for.

# Riding the AI Waves

## (22) Buying level of TSLA

First of all, I would like to give my congratulations to those that made an answer on page one. You are correct if you dare to answer. You will get lost if you do not answer. When viewing from the north pole of the universe downward, the rotation direction of Milky Way is anti-clockwise, but from the south pole of the universe upward, it is clockwise.

Why I raise such a question? That is if you buy TSLA, you surely can win no matter how the risk is, but if you do not buy you can never win. I always say copy trade is no use, for your background is not the same as others. Therefore, different people should have different buying levels.

When you have purchased in the Complex Double Bottom of March and April, you can buy in at any level after the jumping gap of Monday. For your average price is quite low indeed. When your target is aiming at 10 years to follow the historic pay scheme, the ups and downs of these 10 years is nothing at all.

However, AI is not a prophet, they cannot tell you when will the jumping be refilled. All they can do is to ask you to keep alert on this point. When you have purchased on July to August 1<sup>st</sup>, that is around the level AI suggested of \$300 or \$302 or \$304, better wait for the Fibonacci retracement. However, the measurement should not start at the bottom of April 7<sup>th</sup>, but from the formation of Symmetric Triangle in \$367 of May 25<sup>th</sup>, and also near the end of the first big white candlestick of Sep 11<sup>th</sup>.

But if you bought at Sep 11<sup>th</sup> (Thu) just before the Employment Report, what you should wait is the refilling of the jumping gap at \$398.

But if you are a youngster of 20+ in age, no matter you have a girlfriend or boyfriend or not, you can buy in current level or any level. For you can take the risk greater than other people, even if there is a great crash in stock in the future, you can rise again easily but not those pensioners.

But one more point to mind, never borrow any money for investment, try not to use margin, try not to use money that has a deadline, try not to do short selling for you will have a chance of cannot buying back, and thus you will lost your money that earned in the past and future and not just money inside your stock account. Short selling is for professional traders or hedge fund and not retail investors.

The AI has already listed a forecast of the stock price of TSLA in the next 10 years. Please be noted that they are unable to forecast any stock crash in the future, during a period of 10 years, there should be at least one or two big slumps and not just adjustment. Anyway, AI cannot be 100% infallible. Please refer to The Express on Aug 26<sup>th</sup>, the AI said MSTR would rise 573.85% in Sep, at that time the price was \$358 and today is 329.43.

Normally, when you wait for a level to buy, no matter how far or how near, you still have a chance of missing out. That is a chance it would not come true recently. So better try several stocks together to wait and see who reach the target first. NVDA can also be waited when it gets near \$170, for China surely will need their chips, the ban of NVDA chips is nothing but for terms of tariff talk only. Or you can try to buy the MSTR at lower level if you look good at the price of Bitcoin or try to buy the COIN.

But are there any small stocks for young people to buy, cheap and easily pushed up? Sure! Watch The Express of tomorrow.
