The WHITE HOUSE

PRESIDENTIAL ACTIONS

ENSURING AMERICAN SPACE SUPERIORITY

Executive Orders

December 18, 2025

REVERSIBLE & NON-REVERSIBLE SPACE-BASED **WEAPONS**

- KINETIC KILL VEHICLES
- RADIOFREQUENCY JAMMERS
- FOCUSED LASERS
- CHEMICAL SPRAYERS
- HIGH-POWER MICROWAVES
- ROBOTIC MECHANISMS

Donald Trump issued executive order of “Ensuring American Space Superiority”.

[ENSURING AMERICAN SPACE SUPERIORITY – The White House](#)

I have been pushing readers to buy Mars Landing stocks for nearly one year before it is too late!

Now it is really too late!

But still can wait for correction to buy in the second round.

Summary of the executive order can be seen on next page.

The White House's "Ensuring American Space Superiority" initiative is a comprehensive plan aimed at enhancing the United States' leadership in space exploration and security. The executive order outlines several key objectives:

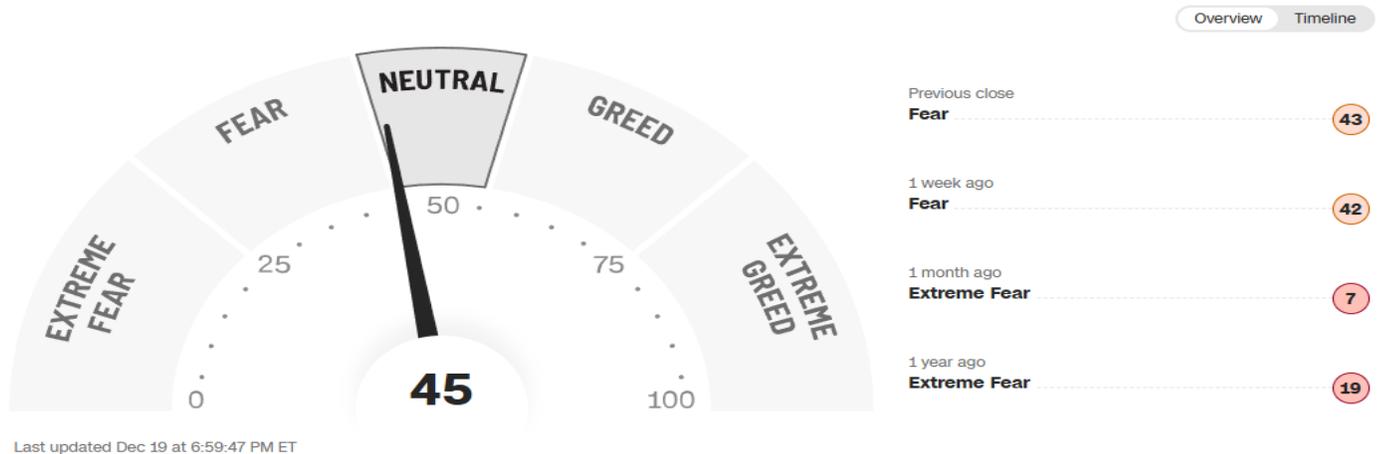

- **Return to the Moon:** The goal is to return Americans to the Moon by 2028 through the Artemis Program, which aims to assert American leadership in space and prepare for the journey to Mars.
- **Lunar Outpost:** Establishing initial elements of a permanent lunar outpost by 2030 to ensure a sustained American presence in space and enable further exploration.
- **Missile Defense:** Developing and demonstrating prototype next-generation missile defense technologies by 2028 to enhance air and missile defenses.
- **Space Security:** Ensuring the ability to detect, characterize, and counter threats to U.S. space interests from very low-Earth orbit and through cislunar space.
- **Commercial Development:** Attracting at least \$50 billion of additional investment in American space markets by 2028 and prioritizing commercial launch services.
- **Space Station Replacement:** Spurring private sector initiative and a commercial pathway to replace the International Space Station by 2030. This initiative reflects the U.S. commitment to advancing space technology and ensuring national security in the increasingly competitive space domain. [↔ 6](#)

North East West South is NEWS

TikTok announced that it has signed a joint venture agreement with investors, allowing them to continue operating in the United States and avoid the threat of a ban due to Chinese ownership.

Japanese automaker Toyota announced that starting next year, it will import three Toyota models manufactured in the United States back to Japan: the Camry sedan, the Highlander SUV, and the Tundra pickup truck. This move is clearly intended to appease US President Trump, who has accused Japan of being "extremely unfair to its allies" in trade, stating, "They don't buy our cars, but they sell millions of their cars to us!"

US Homeland Security Secretary Noem announced today the suspension of the US green card lottery program, stating that the foreign suspect in last week's mass shooting at Brown University, an Ivy League school, used this program to enter the United States.

The Trump administration announced on Friday (19th) a new round of drug price agreements with nine major pharmaceutical companies, including lowering Medicaid drug prices and providing discounted medications to out-of-pocket consumers through a government platform. This includes pharmaceutical companies such as Merck (MRK), Bristol-Myers Squibb (BMY), Amgen (AMGN), Gilead Sciences (GILD), GlaxoSmithKline (GSK), Sanofi (SNY), Roche (RHHBY) and its subsidiaries Genentech, Bristol-Myers Squibb, and Novartis (NVS).

Several thousand victims of financial scammers in Shanghai went for demonstration to request the police to release the scammer who cheated away their money by Ponzi scheme. He promised the victim to invest in him and can get a monthly dividend of 30% and yearly dividend of 360%, but he has no trading just asked them to find new comers to pay the old. When no new comers join the scheme, he has gone bankruptcy. But victims afraid the police would take away the frozen money and requested to free the scammer so that they can get back a little, better than none.

Key Insights

- **2021 Santa Rally was positive (+1.38%),** but January and the full year were negative due to inflation and rate hike fears.
- **2022 saw a modest rally (+0.78%),** followed by a strong January and a bullish full year, driven by tech recovery and easing rate expectations.
- **2023 continued the trend with a solid rally (+1.40%),** and the S&P 500 posted a strong annual gain of **+14.62%**, led by AI and chip stocks.
- **2024’s rally was weak (-0.28%),** one of the poorest since 2015–2016, likely reflecting macro headwinds like rate uncertainty and geopolitical tension. [2](#)

Mars Landing 2030

(6) Mercury, Apollo & Artemis Projects

The greatest problem of individual investor is too many stocks need to buy, but capital is too limited. I asked the AI to recommend Mars landing stocks, and they suggested over 20 stocks in The Express of 20250529, 20250703, 20250707 and 20251118. Recently, Warren Buffet also had 5 stocks for grandchildren before his retirement (see Market Observation). The coming AI trend also has a lot of recommendations from various venues. What should investors do?

First of all, do not just make copy trade. Don't think it is so easy to copy. Must have thorough understanding before you place your order. Warren Buffett bought GOOG before they launched out Gemini 3 in early November. At that time, he still has 31% cash at hand. This is the hardest point for individual investors to copy. For most people that copied the trade of GOOG would not have 31% cash. This point is more defensive than any defensive stocks.

Let's start from *Do Re Mi!*

After World War II, all people know the importance of developing atomic bomb, and 5 powers of United Nations were aiming at this. Nuclear power is *all in all* and nothing else. Suddenly out of nothing, there aroused a Sputnik Crisis on 4th October 1958. Soviet Union launched a small metal ball with antenna into space *orbit* which is known as artificial satellite, the diameter is only 23 inches (58 cm). It was so unexpected. This shocked US and the whole world and is known as Sputnik Crisis. Before this, if you search in the internet, you can find since 1947, there had been living creatures already sent to space one by one. But why this aroused a Sputnik crisis?

That space was known as lower space or inner space. In 1958, Sputnik entered into the *orbit* of the earth. The response of US was made in 31st January 1958, they launched the Explorer 1 into *orbit*. Thus, kicks off the Space Race. NASA was formed in July 1958 to meet with the race. NASA has launched out several projects, and we need to understand them one by one. They are the Mercury Project, Gemini Project, Apollo Project and now is the Artemis Project.

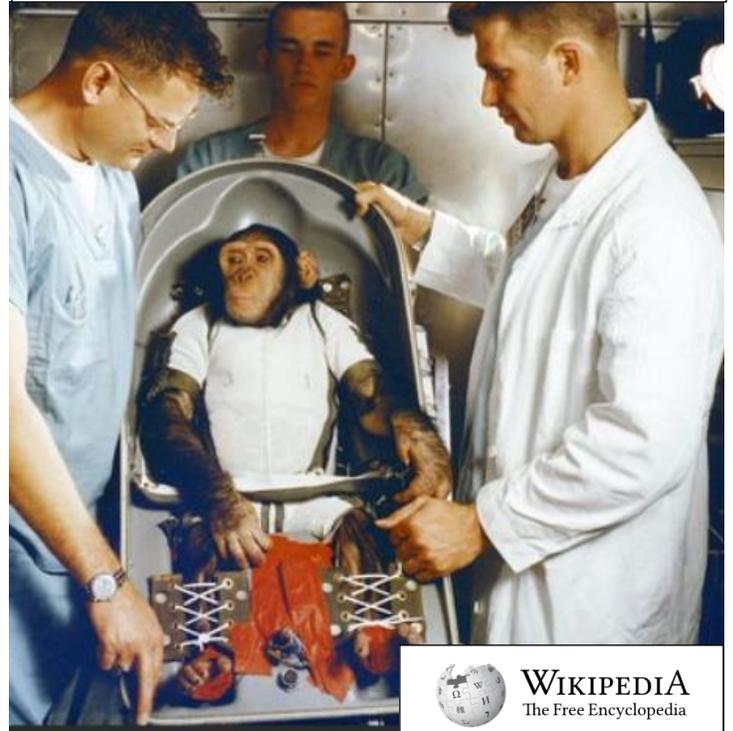

Mind that the Project Mercury is not a project for exploration of Mercury, it has nothing to deal with the first planet of solar system. It is a program running from 1958 to 1963, hoping to send the first man into orbit of the Earth and return him safely earlier than Soviet Union. Mercury in Roman means speed, they want to run the race faster than Soviet Union so named it Project Mercury, for 1 Mercury year only has 88 earth days, the fastest in solar system, that is why the project named. At that time there was no internet and social media, even television was not so popular. The American consulate prepared a lot of documentaries on the Project Mercury and shown in city hall or NGO worldwide, seats were reserved for high school students to watch the film freely. But Soviet Union won the first patch of race. They sent the first astronaut into orbit on April 12, 1961.

US was shocked again. On 25th May 1961, President Kennedy made his famous speech in Congress of sending man to the Moon and return safely by the end of that decade. Thus, the Moon Landing project is launched out and split into 2 projects, the Gemini Project and Apollo Project. Gemini is the name of a constellation and it is not going to explore the Gemini constellation. Apollo is the name of the God of Sun and it is not going to explore the sun. Gemini means twin in Latin; it aims at the rendezvous of the small landing unit and main commander orbiting round the moon, a meeting in right time and right place. Apollo is the sun god in Greek, it is not a project of exploration of the sun, it is a project of landing on the moon. Now NASA wants to land on Mars and the project name is Artemis, she is the goddess of the Moon, but the target of this project is aiming at Mars and not the Moon. However, Artemis is the twin sister of Apollo. Readers must know the meaning of Project Mercury, Gemini, Apollo and Artemis.

Landmarks for animals in space

- 1947: First animals in space (fruit flies)
- 1949: First primate and first mammal in space
- 1950: First mouse in space
- 1951: First dogs in space
- 1957: First animal in orbit
- 1959: First rabbit in space
- 1960: First animals to survive Earth orbit
- 1961: First ape in space
- 1961: First guinea pig in space
- 1963: First cat in space
- 1968: First animals in deep space and to circle the Moon
- 1970: First adult frogs in space
- 1973: First fish in space
- 1973: First spiders in space
- 2007: First animal survives exposure to space

First ape in orbit, 31st January 1961,
Named **Albert**

The Free Encyclopedia

RKL.B is going to break record high, too late to buy now.

Market Observation

Outlook for 2026

BRK.B

\$494.53

-8.860 (-1.76%)

Bank of Japan increased interest rate, originally it should make the Yen rises and dollar falls. Therefore, US stock should fall whatsoever. But why the US stocks rises and even near record high? For the news had already been digested, the stock market fell for a week already, and now people buy on bad news. Part of the reason is waiting for Santa Claus Rally. It is quite easy to say that 80% of the Santa Claus Rally would rise, but quite hard to say whether this year is within the rest 20%. It is the hardest job every year, very hard to find out which year is the exception.

What is lying ahead is TSLA, the Full Self Driving is on last stage of testing, already removed the monitor person on board and only uses remote control to monitor the final test. GOOG is still using the high-resolution map, mind that they are not using the map people using in internet, it is a 3-D map specially scanned for use of autonomous driving. It must be developed city by city by radar sensor. That is using the method of adding a sum in Arithmetic. What TSLA is using is sensor as human eyes, and when successful can technically used in 5 continents of the earth at once. It is a multiple Arithmetic that GOOG hard to chase. However, for the sake of better management, the first stage will be only used in 36 cities so as to meet with different local laws. TSLA now has 8,000,000 e-cars all manufactured by their own. Waymo only 2,500 cars, all made by others. If there is no complete revolution in Waymo of GOOG, it will follow the steps of GM or Ford, being eliminated from the market.

The year of 2026 has a big event, that is the IPO of SpaceX, it is incredible that the first day will be around the value of 1.5 trillion, that is the level of top 10 of the market today. Crazy! Crazy! Crazy! But half a year later, the valuation of the market will increase, still should be around top 15 or so. Nowadays TSLA is believed to have most retail investors, and after that, the situation will be led by both SpaceX and TSLA. This will bring about a bloom to the market, no need to worry whether AI is a bubble. According to the Pay & Performance Scheme, if Elon Musk can fulfil all his task, by the end of 2035, price of TSLA can reach \$2600. Now analysts

changed their forecast, it should be as early as 2030. So, a lot of people want to buy TSLA, but the common problem is limited capital and so much stocks need to buy. So, monthly instalment is one of the best methods though some people say it is the most foolish. But when small investors have limited money, this is the only method.

So, after your study in Christmas holidays and decided what to do in next year, please do not mind the ups and downs of the market when you place your target in 2030 Landing of Mars or 2035 the Pay & Performance scheme of TSLA. Short term fluctuation is nothing but *Dusk in the Wind*.

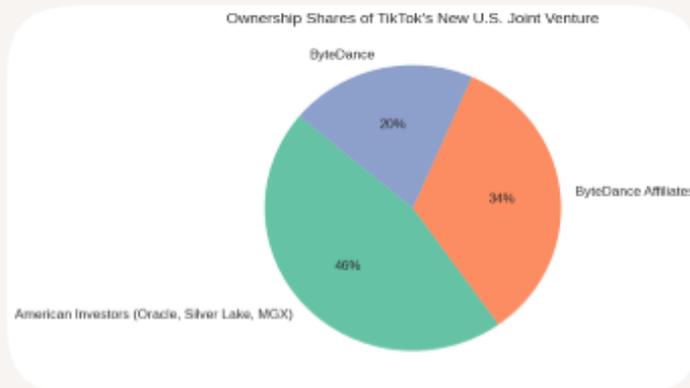

How the winds are laughing, they laugh with all their might! (from Donna, Donna)

No one can tell you when will the golden pit come again, just warned of keeping alert. Therefore, Psychological state is more important than the ups and downs, better learn Tai Chi or Yoga to face the turmoil of market. Yesterday the Winter Solstice has just passed away, and S&P is expected to go up and passed through the Summer Solstice on 21st June 2026. Full Solar Eclipse on 12th August 2026 will cover Europe, but Moscow just partial eclipse. Anyway, market will reach the high between Summer Solstice and Solar Eclipse. S&P will reach the climax of 7900.

Warren Buffett, the God of Stocks will officially retire on 31st Dec 2025, before he steps down, he recommended 5 stocks for his (actually your) grandchildren. These are not fast-growing stocks, but will never die and can stand against any crisis over the next 50 years for grandchildren. The ratio is V (25%), COST (15%), BRK.B (20%), MOODY'S (5%) and VOO (35%). People said it is his epitaph, but surprised there is no AI stock and without the Coke he likes most. Please refer to the video of: [Warren Buffett: If I Could Only Buy 5 Stocks for My Grandchildren!](#)

For the trend of AI, year 2025 is still in stage 0, and 2026 will enter into stage 1. That is AI will no longer stay inside computer or your I-phone, it will come out as humanoid robot and Full Self Driving on the road. Mind that learning AI will be a major trend for senior citizens, youngsters and housewives. Mars Landing will be one of the hottest topics. How to make more money in 2026 and more than 2025? Learn AI deeper and broader than 2025!

Here's the breakdown of TikTok's new U.S. joint venture ownership in a clear pie chart. American investors (Oracle, Silver Lake, MGX) hold the largest stake at 45%, ByteDance affiliates retain about 33%, and ByteDance itself keeps roughly 20%. 1 2 3

GPT-5 is here - OpenAI

Key Insights

- **American Investors (Oracle, Silver Lake, MGX): 45%**
This majority stake ensures U.S. oversight and addresses national security concerns.
- **ByteDance Affiliates: ~33%**
These are related entities still tied to 1 ByteDance but structured to reduce direct influence. 2 3
- **ByteDance: ~20%**
The parent company retains a minority position, marking a significant reduction in control compared to its previous full ownership.

Why This Matters

- **Regulatory Compliance:** The restructuring was designed to satisfy U.S. government demands for reduced Chinese control.
- **Strategic Balance:** Oracle's leadership role provides technical and governance oversight, while ByteDance maintains a foothold in the business.
- **Future Implications:** This ownership model could serve as a precedent for how foreign tech firms adapt to geopolitical and regulatory pressures.

Would you like me to also create a **timeline chart** showing how TikTok's ownership evolved from 2020 (when the first ban threats emerged) to this 2025 restructuring? That could highlight the strategic shifts over time.

This is AI on Google Search, and it is powered by the Gemini family of models. It does not have a name like "Gemini" or "Grok." 

The new independent U.S. company, **TikTok USDS Joint Venture LLC**, has a complex ownership structure expected to finalize in January 2026, with the majority stake held by American and global investors to comply with U.S. law.

A pie chart representing the ownership of the new U.S. entity would break down as follows:

AI on Google Search
Gemini Family

Ownership Structure of TikTok USDS Joint Venture LLC

Shareholder Group	Stake Percentage	U.S./China Side
Oracle, Silver Lake, and MGX	45% (15% each)	U.S. & Global Investors
Affiliates of existing ByteDance investors	30.1%	Primarily U.S. & Global
ByteDance	19.9%	China (Retained Minority Stake)
Other Investors	5%	U.S. & Global
Total	100%	

Key Components

- **U.S.-majority Control:** American and global investors will collectively hold an 80.1% stake in the new entity, while China-based ByteDance retains a 19.9% minority interest, which is the maximum allowed under the U.S. law.
- **Board of Directors:** The new joint venture will be governed by a seven-member board, with a majority of American directors. ByteDance will appoint one board member.
- **Operational Separation:** The U.S. entity will be responsible for U.S. data protection, algorithm security, and content moderation, with all U.S. user data stored in a secure cloud environment run by Oracle. ByteDance-controlled entities will manage global product interoperability and some commercial activities separately, such as e-commerce and advertising.
- **Trusted Security Partner:** Oracle serves as the "trusted security partner," tasked with auditing and validating compliance to ensure the algorithm and data are secure and free from foreign manipulation.

The new TikTok US joint venture (officially named TikTok USDS Joint Venture LLC), set to close on January 22, 2026, represents a restructured US operation for TikTok to address national security concerns and avoid a potential ban. This entity will handle backend operations like US user data storage, algorithm security, content moderation, and software assurance. A separate ByteDance-controlled US entity will manage revenue-generating activities such as e-commerce, advertising, and marketing. The joint venture is majority-owned by US and global investors, with ByteDance (the Chinese parent company) retaining a minority stake.

No specific subsidiaries of the joint venture are detailed in available sources, but the overall structure separates control to ensure US data is managed independently from ByteDance's global operations (e.g., Douyin in China remains under ByteDance).

Based on the reported ownership structure of the joint venture:

- ByteDance (China side): 19.9%
- Affiliates of existing ByteDance investors (primarily US/global firms like Sequoia Capital and KKR): 30.1%
- Oracle (US): 15%
- Silver Lake (US): 15%
- MGX (global, affiliated with Mubadala Investment Company from UAE): 15%

(Note: Some sources approximate these to 20%, 35%, and 45% collectively for the investor group, but the exact figures add up to about 95%, suggesting minor additional stakeholders or rounding in reporting.)

This data could be visualized in a pie chart. Would you like me to generate an image of the pie chart based on these ownership percentages?
