S&P curved downward and broke the 250-SMA, technically, it is a selling signal, but the writer said most of the time S&P is running above the 250-SMA, so it is time for treasure hunting.

GOOG broke the neckline of Head & Shoulders which considered the most accurate pattern among all patterns, but the writer had a special topic of Quantum Computer and ask investor to buy besides space industry as golden pit.

Year of Red Horse in 2026 (James Web Space Telescope)

When Donald Trump gave his 48-hour ultimatum on Friday, Elon Musk announced his project of “Terafab” on Saturday, saying the universe is so enormous, the sun occupies 98% of mass in solar system, why we are having so much disputes on earth. He is developing the largest solar energy project, let’s response with improving your personal luck by solar calendar of Geomancy in our training course, rather than aiming at meaningless human disputes on this or that location on earth. The earth is just a tiny dot in solar system. The solar system is just a tiny dot in Milky Way. The Milky Way is just a tiny dot So, forget all those disputes and improve your own luck first.

North East West South is NEWS

Willie Walsh, Director General of the International Air Transport Association (IATA), stated that even if the Strait of Hormuz reopens, it will still take several months for the supply and price of aviation fuel to return to normal.

The Managing Director of the International Monetary Fund (IMF), in an interview, stated that due to the impact of the war in Iran, the IMF is prepared to lower its global economic growth forecast and warned that the global economy's capacity to withstand shocks is insufficient and faces risks.

Federal Reserve Vice Chairman Philip Jefferson stated, "I remain cautious about the outlook. There is a high degree of uncertainty in the economic situation, exacerbated by rising energy prices and conflicts in the Middle East. However, I still believe that our current policy stance is appropriate and allows us to assess the direction of the economy."

AMD's AI Director, Stella Laurenzo, recently submitted a problem report to the official Claude Code GitHub repository, attaching 6,852 real engineering session logs. She accused Anthropic's AI programming tool, Claude Code, of experiencing a systemic performance degradation since its February update, with the median thought depth plummeting by 67% and monthly API fees surging from \$345 to \$42,121, an increase of approximately 122 times.

Supermicro Computer stated that it has appointed a committee of independent directors to investigate the lawsuits filed last month against two employees and an external contractor for illegally selling servers to China. Its co-founder was previously charged with violating export controls.

World Observation

Day 1506
Russia/Ukraine Conflict

What will happen next?

Just 90 minutes ahead of the ultimatum that the US would turn Iran into Fire of Hell, Donald Trump was at the situation room of White House, watching B1B and B2 heavy bombers taking off to destroy the whole civilization of Iran. He received the suggestions from the Pakistan Prime Minister Shehbaz Sharif to have a 2 weeks ceasefire with Iran. Trump confirmed the ceasefire should be on both sides and called back the bombers which were already flying on the way.

So, what would happen after 2 weeks? Trump agreed to let Iran collect passing fees from commercial ships that go through the Hormuz Strait. It is actually in breach of the High Sea Convention of the United Nations, and all other countries have the right to give their objections. But if Trump agreed, who would dare to continue to fight without giving a passing fee? Why does Trump agree? He is not a fool! The fee collected of course would have some portion go to the US and other go to Arabian countries who were attacked by Iran during the war. Iran surely can get a considerable portion. How is the ratio? They have to negotiate in the coming fortnight. Just wait patiently!

Actually, the Fire of Hell already started before the deadline. Individual targets like bridges and freeways are already being bombed. It is because the US is in upwind, not only 90% of military power was destroyed by the US, but even the F15 was shot down, they can penetrate the Iranian firepower and successfully rescued the pilot and the weapon officer. The case was even more dramatic than Hollywood movies. It used 250 planes to rescue a single officer. It is not because there is a hero or superman, but a combination of their system and high technology coordination. Even Iran was in favourable geographical condition, but could not capture one enemy officer fallen inside their own country. US again with zero injury to those special forces of rescue among the firepower of Iran.

Iran was in great celebration because their focus is that the US announced the news of ceasefire first. They are on the winning side. Their focus is that they had agreed to keep the Hormuz Strait free for passing for all commercial ships. They considered US surrender and no focus on the enriched uranium or long-distance missiles. Actually, these items need to be negotiated. They dared not say they are ready to manufacture a nuclear bomb in a few weeks as it is a reason for the US to start the war, if they say they have no power to manufacture a nuclear bomb, it has no face at all for it means the destruction of Midnight Hammer Operation of last year was so detrimental to them.

They say it is a victory, for the US already said they will target their electric plants, and they called for general citizens including women and children to go over to the plants as human shields. So, if the US bombs the plants will be accused of bombing women and children and thus the US has to surrender. If this can be done, the war in Ukraine does not need to last for 4 years or Iran should use it in Day-1 which is Feb 28. It is quite an emotional and sensational news, such as in Gaza, Hamas hid under hospitals and shot out missiles, and the Israeli side automatically detected the shooting platform and shot out missiles to destroy them. Then the press took pictures of people crying over dead bodies of children and women. It is the best news for reporters. So, who is right or wrong, does not decide on the UN's rules of not allowing the use of human shields, but depends on how many keyboard fighters are employed to show deaths and injuries on which side. Of course, deaths on children and women would be more sensational news than the soldiers and they have no chance to report the picture of how to shoot out rockets underneath a hospital, only have a chance to report after it is bombarded.

Investors better take chances on investing rather than aiming at who is in breach of the rules and laws of the UN. No one is allowed to collect passing fees in public waterways. Now this international value and order established after World War II will be broken, who will follow next? If one country can do this, why cannot others? Focus is not on inflation caused and will continue how long and how deep, but they want a ceasefire now!

Market Observation

Thank God It's Friday

~~WTI~~

\$95.56

~~Brent Oil~~

\$95.08

Thank God It's Friday is the name of a movie. It is also the name of a song and a light restaurant chain in the US and worldwide. But the expression is commonly used not just because of Friday, but used to describe a burden that can be put down now. During last Thursday, which was in memory of the Last Supper, I used the whole report to describe focus should be on the future. The Heading is "*Stocks for Tomorrow*", the first sentence is "*The war in Iran surely will have an end one day*".

Again, too many stocks need to be bought, too little capital at hand. It is the problem of retail investors. Potential stocks including those from Quantum Computer, Space Industry, Crypto and coming IPOs of the year. Basically, according to the Fear & Greed Index, buying should be divided into 3 portions, that is when reaching 15, 10 or 5 points. No need to wait for 2 or 3 points as of the Liberation Day of last year, for sometimes it can rebound just at 15.

Even S&P formed a round top, and continues to curve down, and already broke previous low, the situation cannot be fixed according to chart analysis. For what recently governs the market is not technical data, but the situation in the Middle East. Both sides have the right to declare victory at any time. For they really had given the market some surprises. Great enough to announce victory! Israel already decapitated their highest spiritual leader and 48 keymen on the first strike, the US already destroyed 90% of Iranian military power. Iran holds the Hormuz Strait and the effect is greater than expected, much better than bombarding nearby countries.

Therefore, it is time for treasure hunting. The Space Industry may be a little late, for I have already asked investors to buy Mars related stocks for more

than a year, and now Moon related stocks are exactly the same, even can buy but a little late. However, Quantum stocks are new concept, still worthwhile to buy now even GOOG has a large jumping gap up. Please also mind that NVDA had jumped from underneath all 5 major averages lines to above them. Technical analysis is not so important now.

Individual investors may ask, the ceasefire is just for 2 weeks, what will happen after that? Will Trump TACO again? Is he used to chicken out? Don't worry! No need to wait for 2 weeks, now Trump is already being complained as chicken out, you can see how many jumping gaps are there in the blue chips! The response of market is quite bullish anyway. If Trump does not chicken out, he will be complained as dictator or violating laws of the UN. If Trump lets Iran collect passing fees, he is a coward, if he does not allow, he is a war lover.

Iran also has their dovish and hawkish power, dovish is the president who is in charge of diplomatic relations and talks. Hawkish is the IRGC, who keeps on fighting since they can hold the Hormuz Strait and economy is not on their side, it is on the president's side. Their responsibility is to fight.

On more point to minds is Crypto, it sometimes had a reverse trend with the 3 major indexes, so it can be considered as defensive or anti-falling stocks. Cathy Wood, the Goddess of Stocks once said 2026 is a year for Crypto. In the first quarter, Bitcoin had no rise trend, but at least the falling trend stopped. So, for those that are afraid the indexes may be too high can try Crypto related stocks. Anyway, try something to improve your personal luck first, if you had purchased in early April or late March, congratulations! But if not, you need to have better luck at least to buy in the lowest week even though it is not the lowest day.

It is the year of Horse in Chinese Geomancy. The Artemis II space craft is named Orion. Orion had a Horse Head Nebula! The Earth is in the Orion Arm of Milky Way of our Galaxy system.
