The first patch aims at improving your personal luck

**iHandbook.org**

Year of Red Horse in 2026 (James Web Space Telescope)

When Donald Trump gave his 48-hour ultimatum on Friday, Elon Musk announced his project of “Terafab” on Saturday, saying the universe is so enormous, the sun occupies 98% of mass in solar system, why we are having so much disputes on earth. He is developing the largest solar energy project, let’s response with improving your personal luck by solar calendar of Geomancy in our training course, rather than aiming at meaningless human disputes on this or that location on earth. The earth is just a tiny dot in solar system. The solar system is just a tiny dot in Milky Way. The Milky Way is just a tiny dot ..... So, forget all those disputes and improve your own luck first.

North East West South is **NEWS**

The US Federal Reserve kept interest rates unchanged, maintaining the target range for the federal funds rate at 3.5% to 3.75%. In its post-meeting statement, the Federal Open Market Committee (FOMC) explicitly stated that geopolitical risks introduce additional uncertainty to its dual mandate of maintaining employment and controlling inflation.

The European Central Bank (ECB) also kept interest rates unchanged. ECB President Christine Lagarde clearly stated that inflation risks are now skewed to the upside, and the Governing Council will focus on any signs of a second-round effect from the energy shock.

The Bank of England (BOE) explicitly stated that it is closely monitoring whether a second-round effect will lead to increased domestic inflation. Coupled with the unexpected unanimous decision by the Policy Committee to hold rates steady, the market interpreted this as a signal of a shift towards a more hawkish stance, and market pricing has already priced in a rate hike this year.

The Bank of Japan (BOJ) is more concerned about rising inflation. Its statement reiterated that if the outlook projected in its January 2026 report materializes, the BOJ will continue its policy normalization, leading us to believe that a rate hike in April is still possible.

The U.S. Federal Communications Commission (FCC) announced that it will vote on April 30 on a proposal to completely ban Chinese laboratories from testing electronic devices, covering consumer electronics such as smartphones, cameras, and computers, a significant expansion from last year's ban which only targeted government-controlled laboratories.

Both RKL B and ASTS had rocketed up and have adjustment according to Fibonacci series, thus can buy at low.

AI cause a lot of job cuts, but space industry generated a lot of job both on and outside the earth.

The low of these stocks are above the 250-SMA, but the high now is above all 5 major average lines.

History re-appears itself and golden pits are shown in April of 2025 & 2026.

## World Observation

Day	1412
Russia/Ukraine Conflict	

### Who needs peace more?

Why is there a peace talk in Pakistan? Simply both the US and Iran are exhausted, both of them need peace. But who needs more? Who needs less? Just bet on the right horse! The one that needs peace less is in the upwind (tailwind) and who needs more is in downwind (headwind). Both sides claimed that they are in control of the whole situation, war and peace depends on their side and not the other side.

Investors just place your investment on the winning side. That's all!

The Strait of Hormuz should be going back to pre-war status, that is open for all. No matter how much the passing fee, must keep it back to normal. The US destroyers are sweeping naval mines now and passing through the Strait. It is said China supplied the shoulder anti-missile system to shoot down the F15 and Iran can also use supersonic missiles from Russia or China to shoot down warships passing through the Strait.

Anyway, the Strait will be going back to normal, it is what they are negotiating. But how about the enriched uranium, if for civil usage, the condensed value should be 10%, but now they are at 60%. Still there will be support of Hamas, Hezbollah and Houthi. Iran asked for war compensation and the US is on the winning side and would not give any compensation, but would not object to them collecting passing fees only if the US and Middle East countries can get a considerable portion.

The road of peace talk would not be plain and straight, still have a lot of ups and downs. But the price of petroleum still would fluctuate upward. After the war, full production will come out, not just in the Middle East, but also Venezuela will increase their production. Therefore, the price would go down to \$67, which was on Feb 28. But the velocity will be quite high. Meanwhile, the passing fee will be collected in Bitcoin, so please keep an eye on the crypto recommended on The Express of 20260410.

Let's look further beyond. The war will be over one day. They have no power to last longer. Both sides are on the edge of collapsing. After that what will happen? Focus of the market will soon go back to AI. Not arguing on whether AI is a bubble, but get ready to face the job cut of AI. Just in March of 2026, already 60,000 jobs had been replaced by AI and more will be coming. On the inauguration of Donald Trump last year, it was said that 41% of the jobs will be cut off by AI by 2030. It is a horrible future, what should general citizens do?

Mind that the Space Industry Index has risen from 1859.05 of last week to 2116.79. Investors or job hunters should keep an eye on the space industry. Of course, it is not easy to apply for a crew member of the Artemis Project, but the Apollo Project of 1969 employed 400,000 staff, and now the space industry is aiming for a period of 20 years of developing a city on the Moon and Mars. They are developing a lot of jobs and if you are involved in downstream related industries, the future is so bright and wide. All other industries are cutting jobs, but the space industry is adding jobs. This is the difference. Please refer to The Express of 20260326 and 20260330.

## Market Observation

### Golden Pit & 250-SMA

# SOX

Philadelphia Semiconductor

## 8,889.83

+200.29 (+2.31%)

Trading the US stock is very easy, but still needs some personal luck, that is to grasp the chance immediately.

The hardest pattern to forecast is the V-shape rebound and it is the most accurate one. Why is it hard to know beforehand? For it has no symptoms at all. It can come at any time of a deep fall and rebound suddenly. This is known as a V-shape rebound. It is logical to give a simple answer of how it forms. During a continuous fall, when the market is oversold, it can attract capital from worldwide. The US stock market is a safe haven. When the US market falls, all other markets are falling. They have nowhere to put their capital, so just place it in Wall Street, hoping that the rebound will be faster than others.

The golden pit of 2025 gave investors a lot of hope that the US stock market is a safe haven. So, when it is falling nowhere on earth will be in a better position than the US, therefore a V-shape rebound can come out all of a sudden. The hardest of all is that when they have a jumping gap, not necessary to refill, just see the gap last May and now, it can go up directly, with or without a refill. So, if the peace talk in Pakistan is successful, it can continue to jump up, if failed, then it can refill the gap. Therefore, no need to guess this or that, the chance is 50 to 50. Better improve your personal luck, so no need to rely on the chance of half and half.

Another point is of the 250-SMA, at most of the time, the 3 major indexes are running above this line, so when it penetrates down the year line, no need to sell, it is the best time for buying. And when choosing individual stocks, always choose those that run above the 250-SMA frequently, and now they are all above the major 5 average lines. RKL B, ASTS and ARKX fulfilled the above conditions and even the S&P the same. Go! Go! Go!
