North East West South is **NEWS**

Iran's Foreign Ministry said today that Tehran is charging ships passing through the strategic Strait of Hormuz a "navigation service" fee, not a passage fee.

Meta announced in May that it would lay off approximately 8,000 employees globally, representing about 10% of its total workforce, sparking controversy. Jeremy Bernier, a former senior software engineer who was laid off, wrote an article on the social media platform X on May 22, publicly accusing some teams within Meta of being dominated by Chinese employees, and of non-Chinese employees facing workplace discrimination and being the first to be laid off.

Pope Leo XIV published his first major teaching document during his presidency, warning that artificial intelligence (AI) needs to be "disarmed."

Bloomberg data shows that Taiwan's total stock market capitalization climbed to \$4.95 trillion on May 25, surpassing India's \$4.92 trillion to become the world's fifth-largest stock market, after the United States (\$77.95 trillion), China (\$15.61 trillion), Japan (\$8.7 trillion), and Hong Kong (\$7.25 trillion). The Taiwan Weighted Index hit a new record high on May 26, with TSMC accounting for over 42% of the Taiwan stock market, and its share price rising approximately 49% year-to-date.

SpaceX is shifting its focus in solar energy development entirely to the space sector, claiming that "space-based power generation" will become the future power solution for data centers. Space-based solar arrays can generate electricity around the clock, with efficiency more than five times that of ground-based power plants.

“Start of Summer” can be seen in Stonehenge of the UK, but now only members of the Royal Astronomical Society can enter into that circle. General tourists cannot enter now.

TSLA is benifitted by the IPO of SPCX.

Since Nov 2025 the Harvest Moon, NVDA fell on every good news. Getting harvest!

Please compare carefully, QQQ is really running faster than NASDAQ. It is said 0.7% per year.

Oil price dropped to the bottom of Bollinger Bands and support of Ichimoku Cloud. It made Asian stock markets on record high.

The rising trend of TSM is in an angle of 45 degree for the past year. This angle is said as the most ideal rising trend for there is enough digestion which made the rising firm and steady.

World Observation

Day 1554
Russia/Ukraine Conflict

Attention Deficit Hyperactivity Disorder (ADHD)

Last Saturday, Trump said that peace in Iran will come soon, for the talk had made great progress, but the version of Iran and Pakistan are not the same as the US version. On Sunday, he said there is no need to be in a hurry, for time is on their side. Actually, he gave a lot of ultimatums of bombardment but no action at all, therefore people would not be afraid of the threats again. Now the ceasefire is broken, for the US found that Iran is laying mine in public water which is against international law. So Iranian ships were sunk by the US navy.

But the Asian market still went up. The Nikkei Index broke the record high of 65000 points and closed at 64996, the highest level in the world. Korean market also reached a record high. The Taiwanese market rose up to be the 5th largest in the world. TSM in Taiwan occupied 42% of the Taiwan Weighted Index. After all, it is really a miracle for such a small island of 23 million population only. TSMC is known as the Silicon Shield of Taiwan. To a lot of institutional investors, TSMC is one of their major focuses; but to Warren Buffet, it is his Waterloo. He got lost in this stock! For his interest in IT stocks is not so great. This is also a warning of copy trade, but amateur investors like to forget such a remarkable example.

Why does Donald Trump always change his mind? The writer said his policies needed to be up-date, up-hour, up-minute and up-second. The greatest example is in the tariff war of last year. This year in the Iranian war he ordered the F-35 to fly up twice and called back at once. He issued a lot of ultimatums to Iran and is teased as TACO (Trump always chicken out), and NACHO (Not a chance Hormuz Opens), and now the strait is still not yet open as pre-war times. People said that he is infected with Attention Deficit Hyperactivity Disorder (ADHD). Please refer to the elaboration of AI on the next page.

The war in Iran began on Feb 28th, and Trump said it would be finished in 4 to 5 weeks. On March 11th the writer said it needs several months and not just 4-5 weeks. March is the Wolf Moon, and the Super Blood Moon also brought 3 major indexes to a golden pit. On March 16th the writer said the war would end between June 21st and Aug 12th. The war started in Lunar Eclipse and may end in Solar Eclipse.

Now the state of Hormuz is not yet opened, but for the enriched uranium, there will be a grace period of negotiation which is 60 days, that is by the end of July, coincidentally within the above period. Iran promised to dilute the enriched uranium to 0.71% which is suitable for civil usage like generation of electricity. Now it is up to 60% which means it will be ready to upgrade to 90% in several months, and when up to 90% can be completed to generate atomic bombs in weeks. So now the enriched uranium is not a problem but the problem is still in the opening of Hormuz Strait.

The US said attacking the ships of Iran who were laying mines in public water is a defensive action for they are actually against the terms of ceasefire. The action of Iran is a war action. Iran said they would retaliate. East Asia depends on the oil of Persian Gulf very much. But the Korean, Japanese and Taiwanese markets not only had not slump but all are on record high now. Too many threats on the side of Trump and Iran, nobody would be afraid of them. Why? In Iran the hawkish party which is the IRGC is still holding the power, they want to fight; but the dovish party is gaining more power now, they want peace. So, let's wait and see! Threats of Iran and Trump are stories of the Wolf is Coming, it is just like *Aesop's Fables*, no one will believe in them. Better believe in Financial Astrology than the negotiators of US and Iran. Better believe in the Crimson Horse and Red Goat of the year!

Let's see, NASDAQ 100 not only hit a record high, but also broke 30,000 points. On one hand investors afraid of Hormuz Strait would bring about inflation which makes the rate cut cycle change to rate hike cycle; on the other hand, they neglect the threat and fighting in Hormuz Strait. Why? Because this year is the year of Crimson Horse and Red Goat, fires are hot and everyone would afraid, but also will be neglected!!! Get ready for the IPO of SPCX and space industry stocks please!

Attention Deficit Hyperactivity Disorder (ADHD)

You've raised two intertwined points: the perception of Donald Trump's decision-making style, and how retail investors should navigate markets when political leadership seems unpredictable. Let's unpack both.

GPT-5 is here - OpenAI

On Trump and ADHD claims

- There is **no verified medical evidence** that Donald Trump has ADHD. Claims like these are speculative and often used rhetorically by critics.
- What is observable, however, is his **pattern of abrupt reversals** — whether in trade policy (tariffs) or military actions (Iran, F-35 deployments). Analysts often describe this as a **transactional, improvisational style** rather than a consistent doctrine.
- Nicknames like "TACO" (Trump Always Chicken Out) reflect political commentary, not medical diagnosis. They capture frustration among critics who see his reversals as weakness, while supporters sometimes frame them as tactical flexibility.

Implications for retail investors

Unpredictable leadership creates **policy volatility**, which directly impacts markets. For example:

- **Tariff wars** → sudden shocks to supply chains, tech stocks, and commodities.
- **Middle East military moves** → oil price spikes, defense sector swings, and broader risk-off sentiment.

Retail investors can't control the politics, but they can control their **risk management**. Key strategies:

- **Diversification:** Spread exposure across sectors and geographies so one policy reversal doesn't sink your portfolio.
- **Hedge geopolitical risk:** Energy ETFs, gold, or volatility instruments can act as cushions when uncertainty rises.
- **Focus on fundamentals:** Companies with strong balance sheets and global reach tend to weather policy swings better than those reliant on one market or government favor.
- **Avoid overreacting:** Political headlines often trigger short-term volatility, but not all reversals have lasting economic impact.

The bigger picture

Trump's unpredictability is not unique — markets have always had to deal with leaders who change course. The lesson for retail investors is to **expect volatility as normal**, not exceptional, and build portfolios resilient enough to withstand it.

Would you like me to break down **specific sectors or ETFs** that historically perform better during periods of geopolitical uncertainty, so you can see where retail investors often seek shelter?
