Bitcoin price fell for one whole year

Vix Index of CBOE

18.76 +0.13

1) Stable Period : between 10 to 20 points
2) Warning Period : between 20 to 30 points
3) Panic Period : over 30 points

The CBOE Volatility Index (VIX) measures the market's expectation of 30-day volatility for the S&P 500 and is probably the most popular index concerning the fear of investors.

North East West South is ***NEWS***

On June 10, Anthropic sent a letter to Senator Tim Scott, Chairman of the Senate Banking Committee, and Ranking Democrat Elizabeth Warren, accusing Alibaba's AI lab, Qwen, of launching the largest "distillation attack" to date on its Claude AI model through nearly 25,000 fake accounts, generating 28.8 million interactions, surpassing the combined number of attacks by Deepin Search, Rare Earth Technology, and Dark Side of the Moon.

Brent crude oil futures prices fell more than 1% today, dropping below their closing price before the outbreak of the Middle East war, as investors became more optimistic about the development of US-Iran peace talks and oil tankers continued to pass through the Strait of Hormuz.

On June 25, Bitcoin plunged 3%, briefly falling below the $60,000 mark on Wednesday, hitting a low of $59,023.11, its lowest level since October 2024.

The Financial Times, citing multiple Chinese chip traders, reported that the supply of Nvidia's high-end AI chips on the Chinese black market has been hampered after the US tightened export restrictions on AI chips. Coupled with the enormous demand for AI computing power from Chinese companies, this has led to a surge in chip prices. Nvidia's flagship AI server, the DGX B300, has seen its price soar from approximately 4 million yuan (RMB) to over 8 million yuan in the past six months. This AI server, equipped with eight Blackwell architecture GPUs, retails for only about $400,000 in the US, or approximately 2.716 million yuan.

Following Nobel laureate John Jumper and Transformer co-inventor Noam Shazeer's announcements of leaving for Anthropic and OpenAI respectively, Google (GOOGL) is reportedly planning to leave Gemini and join Anthropic. These successive talent departures have raised concerns that Google's leading advantage in the AI field will be weakened.

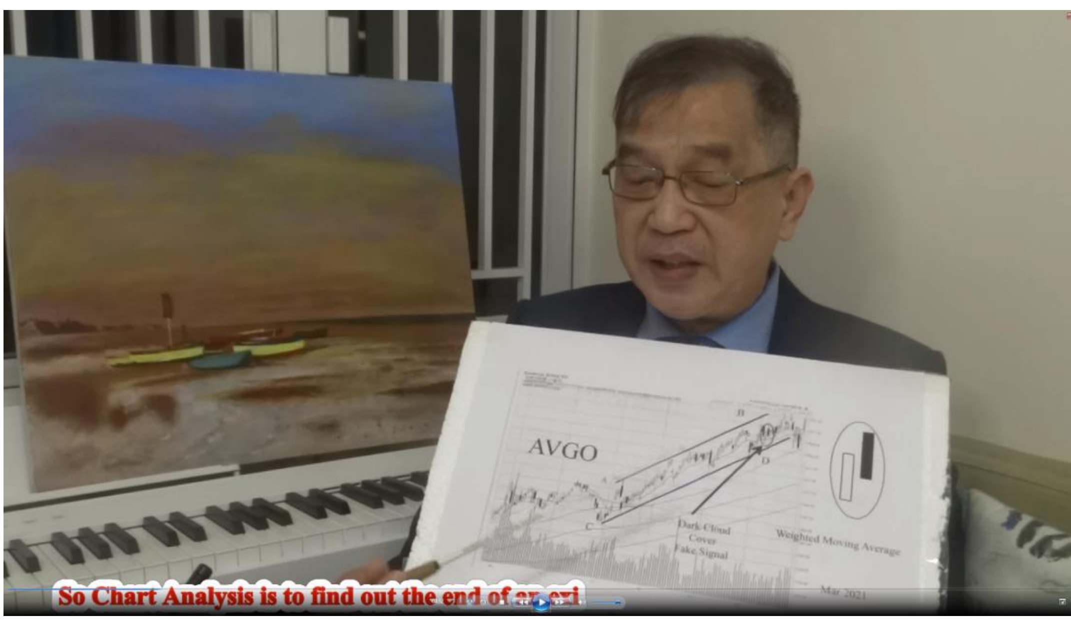
will be resume on August 2 (Sun) 2026

Channel Name: “Daniel Yue & US stocks weekly”



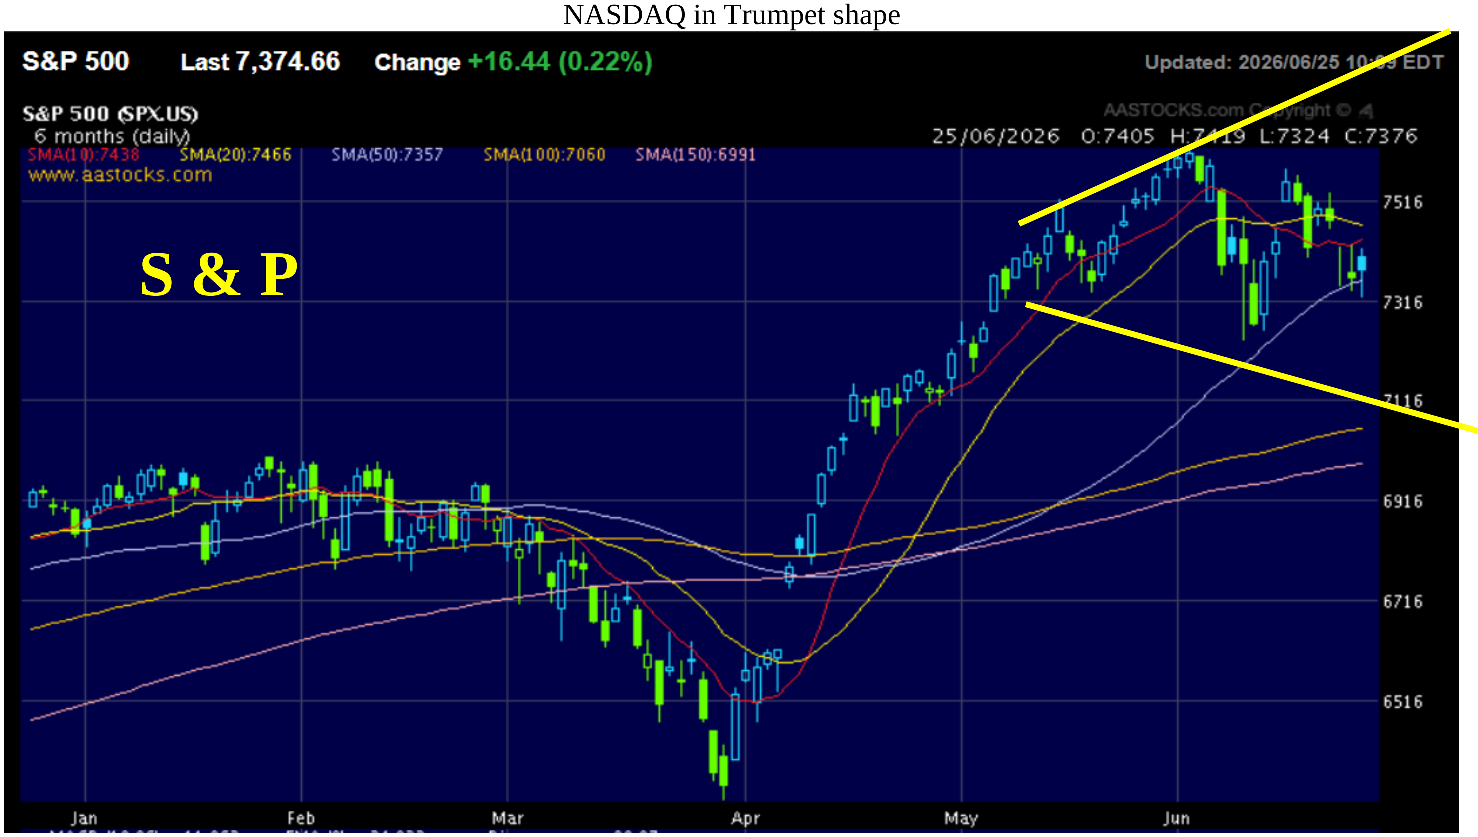
Traditionally, there are 2 kinds of candlesticks, that is black and white, but it was a concept of last century.

What is using in the market nowadays are 4 kinds of candlesticks ……

On March 25, 2021, I have already recommended to buy the AVGO and hold it for long term purpose, the closing price of that day is @42.01 and today opens at $382.

6) Bear & Bull Market watershed of S&P and NASDAQ, 4 kinds of candlesticks Follow Buffet, @ 20221121

NASDAQ in Trumpet shape



S&P also in Trumpet shape, but firmer and clinging upward.

DJIA is a safe haven with support at 50-SMA.

TSLA is in form of a falling flag.

ARKX has already broken the neckline and trying to refill the jumping gap.

NVDA is in a Double Head Pattern of Head & Shoulders, and already broken the neckline, but still clinging upward.

INTC breaking upward of W sahpe.

AMZN breaking downward of M shape.

PLTR after penetrating the yearline could not get up and now the Q2 2026 contracts will believe to have better effect and can buy at low.

TEM can buy at low range

Market Observation

How many Head & Shoulders

CNN

Fear & Greed Index

23 points

Extreme Fear Zone

There are a lot of Head & Shoulders formed in the market and also other falling and rising patterns, let's view them one by one so as to see what the future market will be.

NASDAQ apparently is in the form of a trumpet shape, but more vigorous than S&P. Basically, both S&P and NASDAQ are in the same pattern, but the coverage of S&P is larger, therefore more steadily extended and the whole pattern is clinging upward than NASDAQ. DJIA is in the form of an integral rising trend, and going up steadily with 50-SMA as support. It is the safe haven among the 3 major indexes.

TSLA is in the form of a falling flag with a support at $364 and $339 will be the strongest support.

ARKX in the form of Head & Shoulders has already broken the neckline, however the support is in the year line. Anyway, the whole pattern is clinging upward which means the power of buyers still cannot be neglected. It is going to refill the jumping gap.

NVDA in a Double Headed pattern of Head & Shoulders, already broken the neckline, pattern is still clinging upward, not too pessimistic.

INTC is in a W shape pattern and has already broken the top line, AMZN in M shape pattern and already broken the bottom line.

PLTR has been falling a lot, even once penetrated the year line still could not get upward because of loss of contracts and now the expected government contracts will have a better effect in the Q2 of 2026 results and will be beneficial to the announcement in August.

TEM has been ranging in low and is going to break through upward of the year line, so can buy at low at this level. The former Fed chair Greenspan passed away at the age of 100. This proves now people can easily live up to 100, and the next decade will be more and the people living up to 150 years of age have already been born. Life expectancy of the general public is growing longer and longer, what small potatoes of society should do is to prepare more funds for use in the future up to 150 years old.

Therefore, smart investment is necessary or else how to face the year of 150 ahead even if you don't want to still have to prepare well for it.

To sum up, with so many different patterns, the market is at the edge of oversold and very likely to have a deeper correction, but no symptom of crashing at this stage, still a lot of investment firms adjusted their target of over 8000 S&P at mid-year of 2027. Anyway, think for the best, but prepare for the worst
