North East West South is NEWS

US Secretary of State Marco Rubio stated that Iran is using the Strait of Hormuz as a bargaining chip in the Middle East conflict and called on other countries to increase pressure to jointly safeguard global shipping security.

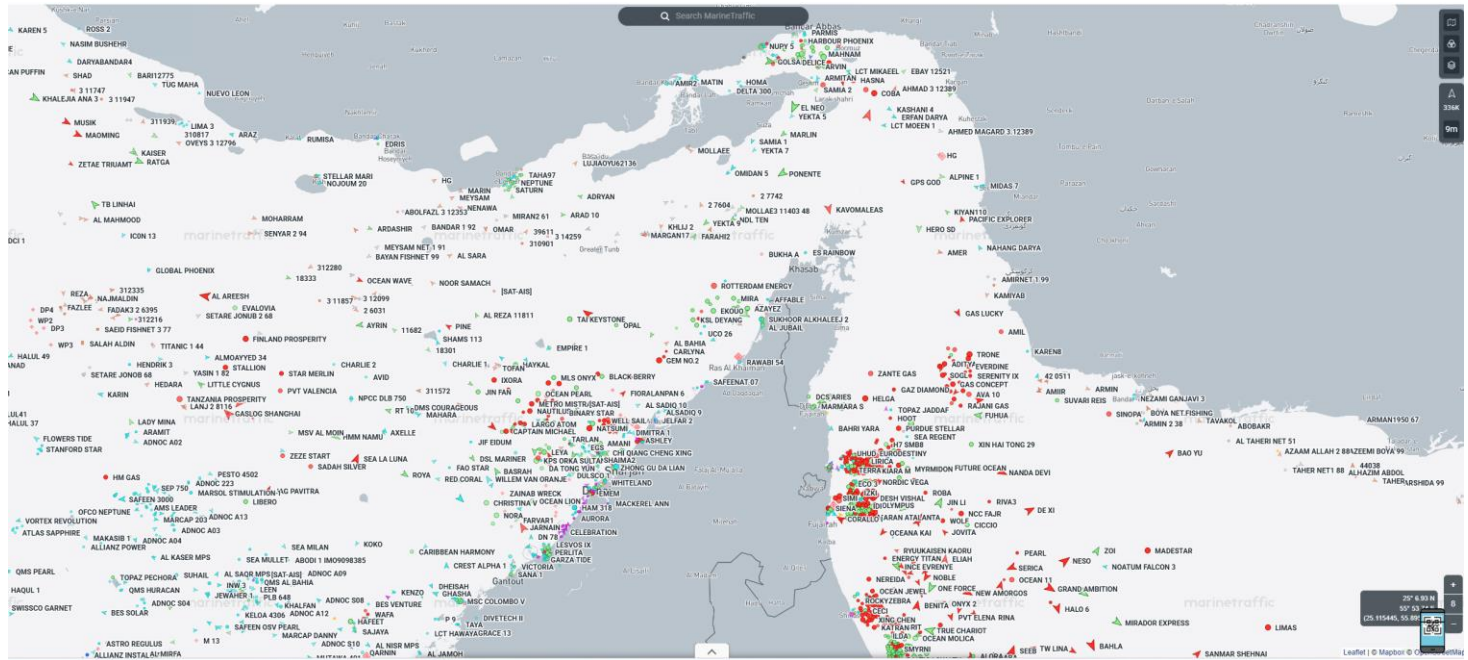

Iranian reports indicate that the US attacked multiple locations in Bushehr, a port city in southern Iran. This city is the site of Iran's civilian nuclear power plant construction.

The Farnborough Airshow in the UK opened, focusing on the future of European fighter jets, the drone race, and countries' pursuit of military sovereignty in the face of unpredictable policy changes in Washington. This year, the defense and civil aviation industries each account for 50%.

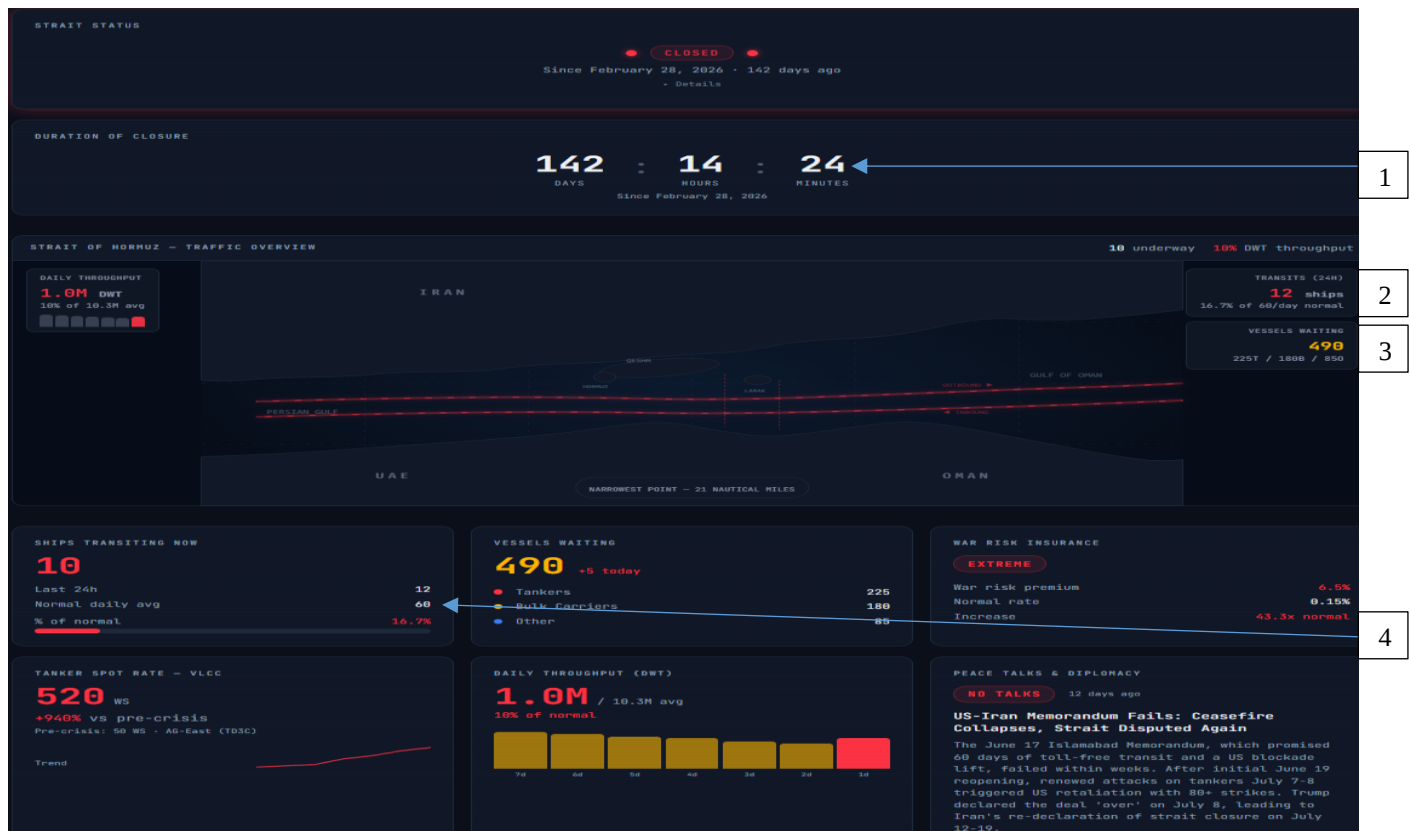

The Japanese yen's continued weakening in recent years has attracted a large influx of foreign tourists to Japan to buy electronics, with iPhone prices there even falling to some of the lowest in the world at one point. To balance the exchange rate difference, Apple officially raised iPhone prices in Japan by 8% to 10% last week.

Morgan Stanley stated that the recent sell-off in US memory stocks has created a buying opportunity. Despite some mixed signals in other areas of the market, the shortage of data center memory continues to worsen.

How to read the live Trackers Of Hormuz Strait

On request of readers, hereby I give a brief introduction of how to read data in live tracker of Hormuz Strait. The basic concept is the same as using your *Flight Radar 24* where you can track the flying of a commercial plane for 24 hours, but it is more complicated. It is not only tracking the Hormuz Strait, actually including the whole Persian Gulf. But you cannot find any battleships for they are all invisible in commercial radars.

On the upper map of page 3, all kinds of commercial ships are shown. When you place your cursor upon a ship, data will be shown including name of the vessel and destination. It can also be seen which direction it is heading, how many degrees heading north or south with the speed provided. Mind that there is a time lap, that is the data shown may not be real time, sometimes had a delay of 10 minutes and sometimes even 5 hours. Can you see the real time traffic? Of course you can! Just pay the subscription fee when you think it's worth it.

TANSTAAFL ----- '***there ain't no such thing as a free lunch***'. It's from the giant of Chicago School of Economy which is Milton Friedman.

How to read the lower chart? How long has the Hormuz Strait been closed? At the time of print screen, it has been closed for 142 days, 14 hours and 24 minutes as shown in the upper half, it is shown as in *number 1*. For *number 2*, it shows that for the past 24 hours, altogether there are 12 ships passed the Strait. For *number 3*, it shows that there are still 490 ships waiting inside the Strait. For *number 4*, it shows that on the average days, there should be

60 ships passing the Strait every day, but now it is only about 16.7% of normal.

As for other details, readers can study on their own. The main point is whether you would like to be a follower or leader. Whether you have the spirit of a leader or follower. Above all, you have to find out the reason. Israel and the US are both famous for decapitation, even in Trump era 1.0, Qâsem Soleymâni, the Number Two Person of IRGC was assassinated by MQ-9 "Reaper" (Personification of Death), and during the first strike on Feb 28, the number One person Hoseyni Xāmene'I, was assassinated with 48 keymen of the cabinet. So, what should the IRGC do when facing such a situation?

They must launch out a new kind of strategy to face it. It is called decentralization of power. It is impossible to push up a new person to replace the assassinated, for it will be killed soon. The on-comers are not willing to take up the place, for they will be assassinated in a few hours or few days. So, the only way is not to concentrate the power in one person, but down to local power including funding and weapons. Therefore, now the central government is hard to control the local government, for they already have enough money to do anything and even enough military power to attack the ships passing by the Strait, that is why the peace agreement is hard to carry out. For any of the local governments can attack any ships passing the Strait. That is why investors should have a live tracker of the ships passing by rather than listen to this and that leader talking.

Things should not be viewed superficially, tomorrow is the result announcement of GOOG, how important it is in the NASDAQ 100, please refer to my YouTube Video (no 201) from 6:12 to 7:02 on next page.
