# North East West South is ***NEWS***

Goldman Sachs analyst Jessica Rindels estimated in a report to clients that total U.S. AI investment in 2026 will approach \$600 billion, "equivalent to nearly 2% of U.S. GDP," and has already accounted for over 10% of corporate fixed investment in recent quarters. The surge in artificial intelligence (AI) spending may be squeezing other business activities, but current indications are limited.

The National Oceanic and Atmospheric Administration (NOAA) stated that July 2026 will be the hottest month on record in the continental United States. The average temperature in 48 states that month will be 76.9 degrees Fahrenheit (24.9 degrees Celsius), excluding Alaska, Hawaii, and overseas territories. This makes July 2026 the hottest July in the agency's 132-year climate record.

U.S. President Trump stated today that any future peace negotiations should include demands for war reparations from Iran, accusing Tehran of supporting or directly carrying out numerous attacks and killings over decades.

Trump Media & Technology Group, the parent company of Truth Social, a social networking platform owned by US President Donald Trump, reported a widening second-quarter loss of \$238 million, primarily due to a decline in the value of its digital assets. The company's loss of \$238.1 million for the quarter ended June 30th represents a more than tenfold increase compared to a loss of \$20 million in the same period last year. This loss was mainly due to impairment of non-cash assets, including over \$190 million in losses on "digital assets, pledged digital assets, and equity securities." The group's second-quarter revenue was \$1.7 million, an 89% increase year-over-year.

HSBC stated that Wednesday's US inflation report could be the next catalyst for the market to further digest expectations of a Federal Reserve rate hike, further reinforcing its view that the "American exceptionalism" narrative is fading.

Market Observation

**WTI $82.04 Brent Oil $87.42**

# NASDAQ 100

Please refer to the chart of indexes comparison on cover page, simply the winner is NASDAQ 100. Superficially, it is quite an easy job to win, but practically not for amatuer or retail investors, for they are unable to win as stated. Even for professional traders, no matter whether you are holding any MBA, EMBA or DBA degree, it is still a hard job, as hard as Landing On the Moon.

If someone gives you $1716 and asks you to turn it to $29695, you will say it's crazy to earn 1631% in the market. So how to achieve it? It needs KUNG FU. This does not mean Chinese martial art fighting, it means the endurance and temperance power needed for a martial art maestro, or simply the power of a maestro that can lead you to success.

The most famous challenge happened in 2007. Warren Buffet, the God of Stocks issued a challenge of $1 million to hedge fund managers of Wall Street, and asked them to perform better than the S&P 500 in the next 10 years from Jan 1, 2008 to Dec 31, 2017. Ted Seides of Protégé Partners accepted the challenge. So for the result of course Buffett wins. VOO had a return of 7%-8%, but the fund of 100 funds only got 2%. For details please ask the AI or staff of our company to elaborate.

In June and July I suggested the ETF of DJIA which is "DIA", because AI stocks were over-estimated and DIA acted as safe haven, and now back to square one. 3 major indexes have gone over the rangning zone and should go back to NASDAQ. Why investors are so hot in SPCX, simply the IPO of TSLA was $17 and the highest point was $498.83, and now even $334 is already nice enough. It is impossible for amatuer investors to do it, and the best way is to buy a basket of stocks that is QQQ. Mind that in the chart of the first page, NASDAQ 100 at first was lower than NASDAQ composite, but later overtook it. I deliberately skipped the dot com bubble. For if it is counted, NASDAQ had a fall of 90% which is not applicable for the situation of today, for the average point will be much lowered.

But please don't think everyone can do the job of turning $1716 to $29695. The KUNG FU needed is more than you can imagine. It is up to professional status, the request is far more than any certificate or diploma can confer you. It needs a person to person guidance over a period of time. The self study and experience needed is much more than any MBA, EMBA or DBA course. If everyone can do it, it is the end of the world! Everyone will turn to the finance field, and no one will generate electricity for you to use in trading, the metro will stop running for all staff will change to traders, all restaurants will be closed for staff already changed their job for trading and you will have nothing to eat.

Further have to repeat the main points of yesterday. QQQ aims at the blue chips of NASDAQ 100 and the general performance is 0.7% better than the index annually. ONEQ is the ETF on all NASDAQ stocks including large and small, penny stocks and rubbish stocks. QQQJ picks up stocks out of NASDAQ 100 but still in NASDAQ market and is known as middle capital stocks and thus need not be afraid of over concentration. CIBR only aims at cyber security stocks, QYLD pays out dividends every month and normally you can get back all your capital in 8 to 9 years and the rest in the account are all profits. QQQE is to find some stocks which are not blue chips but equal to blue chips so as to avoid over-concentration. PNQI is for internet and e-commerce stocks.

To sum up, it is still possible and feasible to change $1716 to $29695. But you have to find a reliable mentor or maestro to have guidance upon you person to person. Just think simply, if a mentor has such a power, he would not teach everyone and would not beg you to join his course. It will be someone like a hermit but still willing to walk down to earth. There are a lot of dreams in the market and just see how you materialize it. This special path is ahead of you, just see how you make use of it. ***Nothing is impossible! Impossible is nothing!***
